Legend

Chaque KCN est montre sur deux lignes: d'abord CC1+CC5, puis CC2+CC3.

nSec: nombre de coupes testees; nFDR<0.05: coupes significatives.

medLog2FC: mediane du log2FC (ecotype vs reste); medAUC: mediane de l'AUC (>0.5 = plus haut dans l'ecotype).

%Pos in / %Pos out: pourcentage median de spots positifs dans l'ecotype / hors ecotype; dPct: difference des deux.

medP / medFDR: medianes des p-values et FDR section par section; bestFDR: meilleure FDR observee.
